ARK ECOSYSTEM: ARKIE AI

Arkle AI आम लोगों को ARK इकोसिस्टम में लाने का पहला और सबसे आसान प्रवेश द्वार है।

1

AI मार्केट में अभी क्या है? समस्या कहाँ है?

- Early-stage AI: जैसे हार्डकोडेड स्क्रिप्ट्स – दिखने में अच्छा, पर विकसित नहीं हो पाता।
- Current AI टूल्स: कुछ हद तक मदद करते हैं, लेकिन सीमित।
- आपकी सोच को आज़ाद बनाते हैं
- काम करने की क्षमता और दक्षता बढ़ाते हैं

लेकिन एक आम समस्या है – आप इस्तेमाल तो करते हैं, लेकिन उसका पूरा मूल्य (value) आपको नहीं मिलता।

2

Arkle AI में क्या अलग है? और यह कहाँ है?

- Arkie AI किसी एक कंपनी का बंद सिस्टम नहीं है, बल्कि एक ओपन और कोलैबोरेटिव AI है।
- इसमें हर यूजर साथ मिलकर इसे बेहतर बनाता है – फीडबैक देता है, सीखता है और सिखाता है।
- आपका इस्तेमाल ही इसे मजबूत बनाता है:
 - ✓ जितना ज्यादा उपयोग करेंगे, उतना बेहतर होगा।
 - ✓ आप फीडबैक देंगे, तो AI और स्मार्ट बनेगा।

आप सिर्फ यूज़र नहीं,
बल्कि एक बिल्डर भी है।

3

Arkle AI क्या कर सकता है?

- काम को जल्दी और सही तरीके से पूरा करने में मदद करता है।
- गहन विश्लेषण करता है और लॉजिक को तोड़कर समझाता है।
- प्रोजेक्ट्स की समीक्षा और जोखिम (risk) की पहचान में मदद करता है।
- कोड लिखने और कोड की समीक्षा (review) करता है।
- डेबलपमेंट में सहायता करता है और गलतियों (pitfalls) से बचाता है।

Web3 की दुनिया में आपका भरोसेमंद AI साथी,
जो आपके हर काम में मदद करता है।

Arkle AI – वो AI जो आप बनाते हैं.

Clarify Two Core Questions Before Participating:

Is it **SAFE**?

Does it have fundamental structures to prevent rug pulls, backdoor breaches, and uncontrolled token issuance?

Can it secure the Treasury and protect against manipulation?

Is it **LONG-LASTING** ?

Does it have sustainable token issuance and price stabilization?

Is there strong governance rather than hype or short-term speculation?

■ Principles for investment and Selection:

Investment is not gambling

Choose fair governance systems

Ensure the security of your investment

It's not a gamble, it's a protocol

Security issues

Is the LP locked?

- ✓ **Locked** → Liquidity is secure, preventing Rug
- ✓ **Not locked** → The project team can withdraw liquidity and exit at any time

Is the minting contract open source?

- ✓ Token issuance logic is fully transparent on-chain, with no backdoor modifications possible
- ✗ **Black-box code**, enabling arbitrary token minting that dilutes value

Is the treasury multisignature and transparent?

- ✓ Gnosis Safe multisignature mechanism, assets verifiable on-chain
- ✗ **Single-signature black box**, allowing the operator to withdraw assets directly

- ✓ Gnosis Safe multisignature mechanism, assets verifiable on-chain
- ✗ **Single-signature black box**, allowing the operator to withdraw assets directly

Sustainability issues

Is there an EM Smart Token Module?

- ✓ Automatically adjusts token issuance rate based on market demand (Premium fixed rate)
- ✗ **No supporting model**; reliant on hype and airdrops to attract participants

Is there an RBS Stable Market Value Module?

- ✓ Automatic intervention activates upon price deviation (buyback/ arbitrage)
- ✗ **Price driven entirely by sentiment fluctuations**, resembling a casino

TOKEN

MINTING

TOKEN MINTING

— Procedure —
(EM Token Issuance Module)

Crypto token minting is the process of creating new digital tokens and adding them to the total supply within a blockchain network, similar to how a government mints *physical* currency.

This process, often performed via a Proof-of-Stake (PoS) consensus mechanism, generates new units of cryptocurrencies or **Non-Fungible Tokens (NFTs)** by recording data onto the blockchain's distributed ledger.

Unlike crypto mining, which uses energy-intensive Proof-of-Work (PoW) to validate transactions, minting primarily focuses on the creation of tokens.
