SATOSHI PROTOCOL

WHITEPAPER

SATOSHI PROTOCOL - SPR

The Creator of a New On-Chain Civilization Era · 2026

SATOSHI

Preface: Three Foundational Questions of the New Era

1) Why has financial civilization fallen into disorder?

Centralized financial systems are inherently opaque and governed by concentrated power.

2) Why has wealth ceased to flow?

The credit-based architecture of the old era has reached its limit.New wealth emerges only through co-creation within decentralized structures.

3) Who will initiate the new era?

Individuals with elevated energetic capacity who align with the principles of the Great Dao, understand decentralization in its purest form, and can selflessly guide communities across the cognitive threshold are known as the Initiators.

SATOSHI

1. The New Civilization Economy: An Era Driven by Energy × Frequency × Decentralization

The Old Era

- Capital as the Dominant Force
- Power Concentrated in Central Authorities
- Money Defined by Its Issuer

The New Era

- Energy × Frequency = Leadership
- Community × Consensus = Value
- Code × Algorithms = Wealth

Wealth detaches from human discretion and becomes an open, transparent, and verifiable discipline of code.

Truths of the New Economy

- Higher Energy » Natural Leadership
- Faster Awakening » Natural Opportunity Capture
- Stable Frequency » Natural Movement Toward Abundance

SPR is the foundational on-chain protocol designed to serve this emerging 'CIVILIZATION-LEVEL ECONOMY'.

SATOSHI

2. The Satoshi Protocol: From Dark-Net Technology to the Engine of On-Chain Civilization

This protocol is designed as a decentralized civilization-oriented economic system created specifically for ‘high-energy contributors’.

▷ High-energy Individuals = People capable of leading communities beyond the old world and creating new decentralized order.

The five foundational logics of the Satoshi Protocol:

1) No Central Authority:
No power core and no ownership by any individual.

2) No Privileged Control:
No entity can alter rules, freeze assets, or stop the protocol.

3) Trustless Architecture:
LP (SPR/USDT) is permanently held by a black-hole address.

4) Pure Code Execution:
All rules are embedded in code and operate autonomously.

5) Led by High-Energy Individuals:
The protocol advances through the guidance of “aware and high-energy contributors”, enabling selfless contribution and the growth of civilization and consensus.

This is the minimal prototype of an on-chain civilization-economy system

▷▷▷ It can expand without limit under the guidance of high-energy individuals.

3. What is the SPR Protocol?

SPR = Automated Market-Making (AMM) + Auto-compounding +
A Sustainably Growing Decentralized Wealth System

▷ It functions as a fully smart-contract-driven on-chain value-growth engine that enables every unit of USDT to generate yield automatically.

SPR Operational Flow (Completed Automatically in Four Steps)

1.Deposit USDT
Users deposit USDT into the smart contract and officially enter the market-making system.

2.Automatic Purchase (Participating in Market-Making)
The contract automatically uses the funds to buy SPR and form LP liquidity, entering market-making operations.

3.Market-Making Appreciation (Auto-Compounding)
Price appreciation is continuously driven by protocol structure. All gains compound automatically with no manual involvement.

4.Redemption at Maturity (Automatic Sell-to-Profit)
At maturity, the contract automatically sells SPR → settles USDT → distributes profit to the user.

System Characteristics = Fully Decentralized and Self-Running

- No Backend
- No Manual Operation
- Full On-Chain Transparency
- No Permissions and No Privileges

SPR = A secure, Transparent, and Sustainably Growing
On-Chain Automated Market-Making Appreciation Protocol

4. How SPR Operates?

(1) Participating in automated market making

After a user deposits USDT,
the contract performs the following steps automatically:

50% is used to purchase SPR → Combined with the remaining USDT to form LP → LP is permanently locked in the black-hole address.

(2) Automatic profit realization at redemption

Redemption at Maturity:

The contract automatically sells SPR
→ The user receives profit as “principal + returns” in USDT

SATOSHI

5. Cycles and Yield

Participation Cycle	Daily Compound Rate	Total Yield
1 Day	0.3%	-
15 Days	0.6%	≈9.39%
30 Days	1.35%	≈49.52%

▷ 1000 USDT → Compounded for 30 days → Redeemed at maturity → Automatic sellout results in 1495.2 USDT.

Profit distribution:

Market-making profit of 495.2 USDT → 100% redistributed as wealth allocation

User Yield 55% (≈ 272.36 USDT)

Referral Reward 10% (≈ 49.52 USDT)

Management Reward 35% (≈ 173.32 USDT)

⚠ Market-making profit tax: 3.5% (Example: 495.2 USDT × 3.5%)

Distribution structure:

- Distributed Shareholders 1.5%
- Protocol Self-Operation 1%
- Ecosystem Development Fund 1%

6. Management Reward Structure

Rank	Total Performance (USDT)	Reward Rate
V1	5,000	5%
V2	15,000	10%
V3	50,000	15%
V4	150,000	20%
V5	500,000	25%
V6	Two V5 Teams	30%
V7	Two V6 Teams	33%
V8	Two V7 Teams	2% Global Dividend

Basic rules:

1.≥ 100 USDT → Automatically becomes a Qualified Maker

2.Promotion Mechanism:

Single-line Structure + Dual-region Requirement

- V1 – V5: Promotion based on total team performance
- V6 – V8: Require two separate regions each reaching the corresponding V-level

3.Global dividend:

All V8 accounts share 2% of total market-making profits equally.

⚠ Earlier achievement of V8 → Fewer participants → Larger dividend allocation

7. SPR Token Economy (Tokenomics)

- Token Name: SPR
- Total Supply: 2,100,000
- Black-Hole Locked: 1,600,000 (LP pool)
- Interaction Contract: 500,000 (Reward Source)
- Initial Circulation: Zero Circulation (Fair Launch, Zero Privilege)

Trading fee: 3.5%

After the protocol reaches maturity → SPR free trading is enabled → Preventing capital from manipulating the protocol.

Secondary market → Buy (3.5%)

- 1% Distributed-Shareholder Dividend (Protocol Contributors)
- 1% Protocol Operation (Autonomous Operation)
- 1% Liquidity Reinforcement (Strengthening the Liquidity Pool)
- 0.5% Burn for Deflation (Continuous Deflation)

Secondary market → Sell (3.5%)

- 1% Distributed-Shareholder Dividend (Protocol Contributors)
- 1% Protocol Operation (Autonomous Operation)
- 1% Liquidity Reinforcement (Strengthening the Liquidity Pool)
- 0.5% Burn for Deflation (Continuous Deflation)

Secondary-Market Profit Tax (25%) | Applied Only to the ‘Profit Portion’

7. SPR Token Economy (Tokenomics)

Conditions for Enabling Secondary-Market Trading:

LP Pool > 5,000,000 – 10,000,000 USDT, then activated through DAO Community Voting

⚠ Profit-Tax Rate: 25% (Applied Only to Profits)

Profit-tax distribution:

5%	5%	15%
Distributed-Shareholder Dividend (Protocol Contributors)	Referral Reward (Protocol Contributors)	Ecosystem Fund (Supporting Ecosystem Development)

Definition of SPR:

SPR = Fair Launch × Infinite Deflation × Distributed-shareholder Dividends × Autonomous Protocol Operation

▷ A next-generation decentralized asset protocol governed collectively by distributed shareholders, where value growth is driven by community contribution.

SATOSHI

8. Security & Transparency

SPR adopts a fully on-chain, zero-permission, and autonomous decentralized structure that ensures the protocol cannot be manipulated by any party.

LP Black-Hole Locking (Permanently Unretrievable)

100% of LP (SPR/USDT) is automatically locked in a black-hole address → Permanent Security.

Fully Open-Source Contracts (All Permissions Removed)

Contracts are 100% open-source with all administrator permissions destroyed → Transparent Data & Immutable Rules.

Assets Remain Redeemable Even If the DAPP Disappears

Assets do not rely on centralized servers → Redemption at maturity is always available on-chain.

Burning, Distribution, and Rewards Fully Traceable On-Chain

Buyback burns, dividends, management rewards, and referral rewards are all executed automatically on-chain.

Perpetual Protocol Operation Without Centralized Servers

The protocol operates permanently on the blockchain and cannot be halted.

SPR = Security × Transparency × Non-Manipulable × Non-Corruptible

▷▷▷ The purest decentralized market-making protocol of the new era.

SATOSHI

9. Why Does SPR “Inevitably Rise”?

1.Absolute Scarcity → Zero Presale, Zero Private Sale, Zero Circulation

2.Continuous Deflation → Every Buy & Sell Tax Is Used for Ongoing Buyback and Burn

3.Continuous Buying → Each Market-Making Cycle Automatically Uses 50% USDT to Buy SPR

The mechanism ensures that SPR’s price will continue to rise.

SATOSHI

10. The Mission of SPR

A Decentralized Economic Protocol designed to serve as a "Global Invisible Wealth Backbone" accessible to ordinary participants.

▷ Everyone Can Participate ◁

▷ Everyone Can Advance ◁

▷ Everyone Can Obtain ◁
Deterministic On-Chain Yield

This is not a technological revolution,
it is an economic awakening for all participants.
